
Index to Volume 4, Number 1–4, Pages 1–234 (1986)

Subject index

(N) *denotes a news item*

Algorithms
  algorithm for analysing optical flow based on the least squares method 38
  comments on fast thinning algorithm for binary images 57
  efficient algorithm for polygon overlay for dense map image data sets 167
  hardware implementation of image registration algorithms 151
Array processor (N) 61

Biomedical images
  processing using the CLIP system 2

Car numberplate recognition (N) 125
CCD video cameras (N) 181, 225
Coordinate analyser (N) 179
Curvature measurement
  edge detection and motion detection 43

Deformation analysis
  application of an optimized digital correlation method to planar deformation analysis 143
Digital correlation
  application of an optimized digital correlation method to planar deformation analysis 143
Digital linear tomography
  method for improving image quality in digital linear tomography 25
Digital video recorder (N) 124

Edge detection
  and motion detection 43
  from single chip (N) 224

Framestores (N) 179

Ground probing radar (N) 227

High-speed electronic imaging (N) 228
Image acquisition systems (N) 223, 226
Image compression microchip (N) 226
Image data sets
  efficient algorithm for polygon overlay for dense map image data sets 167
Image display board (N) 61
Image processing systems (N) 125, 180, 225, 226
Image processing software (N) 59, 223, 224, 226
Image quality
  method for improving image quality in digital linear tomography 25
Image registration
  hardware implementation of image registration algorithms 151
Image restoration
  a parallel approach to the picture restoration algorithm of Geman and Geman on an SIMD machine 133
Imaging interfaces (N) 59, 60
Infrared imager (N) 181

Knowledge-based interpretation
  of remotely sensed images 67

Line images
  invariance in pattern recognition: application to line images 11

Machine vision (N) 183
Machine vision system (N) 61
Mapping
  efficient algorithm for polygon overlay for dense map image data sets 167
Medical imaging (N) 62

Microcomputer-based image processing
  three-dimensional surface measurement by microcomputer 159
Microcomputer-based image processor (N) 124
Microfilm retrieval system (N) 225
Microscope image acquisition system (N) 223
Model-based vision
  'Model': a POPLOG package to support model-based vision 115
Motion
  automated reasoning about image motion using a rule-based deduction system 97
Motion detection
  edge detection and motion detection 43

Noise suppression
  implementation for noise suppression in images 29

Object representation
  curvature-based representation of objects from range data 107
Optical flow
  algorithm for analysing optical flow based on the least squares method 38
Optoelectronic sensor (N) 181
Parallel processing
  a parallel approach to the picture restoration algorithm of Geman and Geman on an SIMD machine 133
  biomedical image processing using the CLIP system 2
Pattern recognition
  invariance in pattern recognition: application to line images 11
PCB inspection (N) 183

Range data
  curvature-based representation of objects from range data 107

Realtime field store (N) 61
Remote sensing
knowledge-based interpretation of remotely-sensed images 67
Remote sensing systems (N) 123
Rule-based deduction
automated reasoning about image motion using a rule-based deduction system 97

Scanning electron microscope (N) 224
Scene labelling
multiconstraint shape analysis 84
'Self-cool' camera sensor (N) 124
Shape analysis
multiconstraint shape analysis 84
Single-chip edge detector (N) 224
Stereo viewing system (N) 60
Surface measurement
three-dimensional surface measurement by microcomputer 159
'Text-on-video' board (N) 59
Thinning
comments on fast thinning algorithm for binary images 57

Video controller (N) 179
Video D/A converters (N) 61, 181
Video filter (N) 224
Video image processing system (N) 63
Video input module (N) 124
Vision control system (N) 123
Vision in the automotive industry (N) 62, 127
Vision processor (N) 59
Vision software
'Model': a POPLOG package to support model-based vision 115

Title index

Algorithm for analysing optical flow based on the least-squares method 38
A parallel approach to the picture restoration algorithm of Geman and Geman on an SIMD machine 133
Application of an optimized digital correlation method to planar deformation analysis 143
Automated reasoning about image motion using a rule-based deduction system 97

Biomedical image processing using the CLIP system 2

Comments on 'Fast thinning algorithm for binary images' (Letters to the Editor) 57
Computer vision and image processing research at the University of Texas at Austin 219
Curvature-based representation of objects from range data 107

Edge detection and motion detection 43
Efficient algorithm for polygon overlay for dense map image data sets 167

Hardware implementation of image registration algorithms 151

Implementation for noise suppression in images 29
Improved digital image processing technique to investigate plastic zone formation in steel 203
Invariance in pattern recognition: application to line images 11

Knowledge-based interpretation of remotely sensed images 67

Medical image processing: the characterization of display images using histogram entropy 197
Merging the AUTOVIEW image processing language with PROLOG 189
Method for improving image quality in digital linear tomography 25
'Model': a POPLOG package to support model-based vision 115
Multiconstraint shape analysis 84

Recognition of handwritten characters — a review 208

Three-dimensional surface measurement by microcomputer 159

Author index

Aggarwal, J K
Computer vision and image processing research at the University of Texas at Austin 219
see Vemuri, B C 107
Ammann, C
see Sinha, R M K 57
Anderson, J A D W
'Model': a POPLOG package to support model-based vision 115

Baker, K D
see Anderson, J A D W 115
Batchelor, B G
Merging the AUTOVIEW image processing language with PROLOG 189
Bovik, A C
see Aggarwal, J K 219
Buxton, H
see Murray, D W 133

Chao, Y J
see Sutton, M A 143
see Lee, C 203
Cheng, M
see Sutton, M A 143
Cross, A
see Tailor, A 67

Davis, R H
Recognition of handwritten characters — a review 208
Diller, K R
see Aggarwal, J K 219

Hayworth, M
see Hua, Z 25
Henderson, T
Multiconstraint shape analysis 84
Hogg, D
see Tailor, A 67
Hua, Z
Method for improving image quality in digital linear tomography 25

Ip, H H-S
see Potter, D J 2

Jin, Z P
see Mowforth, P H 29

Kashko, A
see Murray, D W 133

Lee, C
Improved digital image processing technique to investigate plastic zone formation in steel 203
Lewis, J R T
Three-dimensional surface measurement by microcomputer 159
Lyall, J W
see Davis, R H 208

Mason, D C
see Tailor, A 67
Maybank, S J
Algorithm for analysing optical flow based on the least-squares method 38
McNeill, S R
see Sutton, M A 143
Mitiche, A
see Vemuri, B C 107
Moore, C J
Medical image processing: the characterization of display images using histogram entropy 197
Mowforth, P H
Implementation for noise suppression in images 29
Murray, D W
A parallel approach to the picture restoration algorithm of Geman and Geman on an SIMD machine 133

Peters, W H
see Lee, C 203
see Sutton, W H 143
Potter, D J
Biomedical image processing using the CLIP system 2

Ranganath, H S
Hardware implementation of image registration algorithms 151
Roehrig, H
see Hua, Z 25
